Conference Overview

Gastrointestinal and hepatic disorders are extremely prevalent conditions which can lead to chronic morbidity. Advances in the field of gastroenterology and advanced endoscopy continue to develop at a rapid rate. These are exciting times in gastroenterology and hepatology given the therapeutic advances we are able to offer our patients. Having detailed knowledge of widely prevalent gastrointestinal conditions allows practitioners to develop a comprehensive treatment strategy for their patients.

This conference is designed to provide an overview of common gastrointestinal conditions, focus on clinical advances in these situations, and showcase some of the most current advances in therapeutic endoscopy. Using both didactic sessions and live endoscopy feeds, the latest developments in the fields of gastroenterology, hepatology, and biologics in IBD will be showcased. Opportunities for the audience to interact with the faculty will be provided and encouraged.

Intended Audience and Conference Objectives

At the conclusion of this seminar, participants should be able to:

• Review advanced esophageal imaging techniques and clinical applications of HRM.
• Provide overview of GI conditions.
• Review clinical advances in the treatment options for GI conditions.
