Holly Lisanby, NIMH
Gray Norquist, PCORI
Moderator: Allan Levey, Emory University

2:45-3:00pm  Closing Remarks from co-chairs
Mark Rapaport & Karen Rommelfanger, Emory University
Partners in Treatment Innovation for Functional Neurological Disorders: Patients, Families, and Providers

The Mark and Barbara Klein Mind-Body Conference Series at Emory provides a forum for respectful and open dialogue related to complex issues in diagnosing and treating disorders that tend to fall at the psychiatry-neurology medicine interface, but require a broader and integrative contextualization with all healthcare disciplines. This timely conference will consist of 2 days of interactive meetings and discussions facilitated by a select group of interdisciplinary experts in the field as well as include patient advocates and funding agency representatives.

At the conclusion of this program, participants will be able to:

- Describe the integrated and coordinated care needed for patients in diagnosing and treating their complex and unique disorders;
- Explain the need to work with many specialties in helping patients understand their illness and proper treatment modalities;
- List the benefits of working in integrated teams from neurology, psychiatry, psychology and other specialties to help save medical costs, time and stress associated with repeated doctor appointments.

The Emory University School of Medicine has approved this activity for a maximum of 12 AMA PRA Category 1 Credits (m). Physicians should only claim the credit commensurate with the extent of their participation in the activity. The Emory University School of Medicine is accredited by the Accreditation Council of Continuing Medical Education to provide continuing medical education for physicians.
