Symposium objectives

Upon completion of this symposium, the participants should be able to:

• Discuss the specific corneal diseases that interfere with optimal vision following routine uncomplicated cataract surgery.
• Explore the anatomy of the optimal clear corneal incision and show examples of proper wound architecture to achieve optimal results.
• Describe the different types of glaucoma surgery and how they may be combined with cataract surgery to achieve optimal results.
• Discuss the expanding use of anti-VEGF agents in retinal diseases other than macular degeneration.
• Review the recent clinical trials on anti-VEGF.
• Discuss the applications of adhesive therapy for various ocular circumstances including cataract, corneal and refractive.
• Describe the various uses of the Femtosecond laser for cataract surgery, including the latest clinical data on outcomes.
• Demonstrate the time-honored and new methods of pupil enlargement during Phacoemulsification.
• Demonstrate the new angle procedures that are in the microinvasive category for glaucoma surgery, including canal and suprachoroidal space.
• Recognize the problems related to the atypical cornea and how it can alter cataract surgery outcomes.
• Demonstrate a novel method of opening Schlemm’s canal for 360 degrees with improved results in childhood and adult open angle glaucomas.
• Describe challenging cataract and glaucoma cases.
• Describe the new health care environment and how it will change how doctors interface with patients.
