Symposium Objectives

Upon completion of this symposium, the participants should be able to:

• Discuss the indications, contraindications, and efficacy of keratoplasty surgery in the pediatric patient and the use of keratoprosthesis in adult and pediatric patients.

• Describe how glaucoma medications lower IOP, how to best initiate therapy and whether generic drugs are as good as branded medications.

• Review the clinical features, causative organisms, treatment outcomes and current management options of endophthalmitis occurring after cataract surgery.

• Review the various components used to calculate IOL power and the potential sources of error.

• Describe the clinical features, treatment options and visual acuity outcomes in the treatment of diabetic macular edema.

• Improve the understanding of the clinical evaluation and surgical techniques available to address astigmatism with IOLs in cataract surgery.

• Review the various causes of double vision after routine cataract surgery and how to prevent and treat them.

• Review the best methodology to select test object size and area of field to be tested.

• Review how to determine visual field progression.

• Describe strategies for the management of unhappy patients after premium IOL cataract surgery.

• Discuss angle closure glaucoma and its treatment.

• Explain how to use canal-based MIGS procedures in your practice.

• Identify the treatment options, new techniques and visual acuity outcomes in retinal detachment surgery.

• Review common methods to prevent and manage complications of cataract surgery and obtain basic information on iPhone ophthalmic photography.

• Discuss the moral, ethical and humanistic side of treating a patient with Ebola.

• Describe the impact that the first case of Ebola diagnosed in the United States had on the facility and the lessons that were learned.
